

ICC Spray/Wipes™ for UV Inks

Application Recommendation Sheet

Unique Features

- * Safe to use on all UV ink emulsion systems
- * Flash point well above flammable petroleum products
- * Virtually residue-free after wiping, allowing tape to stick
- * Pleasant, non-petroleum odor

Product Description

ICC UV Spray/Wipes™ are liquid products, which typically have scents ranging from light citrus to mild fruity. They are designed to work in several UV screen print ink cleaning applications, described in detail below.

Application Recommendations

As a General Screen Cleaner and Alternative to Solvent Screen Opener - Apply product, using an ICC Ambi-Squirt™ spray bottle, directly onto the area to be cleaned, and wipe clean with a dry rag. For best results, have excess ink carded away from area to be cleaned.

When Changing Ink Colors or Cataloging Screens - After the ink has been carded out of the screen but with the screen still in the press or lying on a flat hard surface, place an absorbent material (such as newsprint or a strike sheet) on the surface underneath the screen. Then spray product directly onto the screen and mix product into residual ink using an ICC Heavy Duty Screen Scrubber™. Once all ink has been treated and broken down, place a folded rag in the front inside edge of the screen. Then using a firm, sharp, print squeegee, pull a stroke across the screen from back to front. This should pull all ink and chemical residue into the rag, allowing for easy wipe up. Once the residue is removed, detail the screen with a clean dry rag on both sides. Should there be any ink color remaining, reapply the product and buff dry with clean rag.

For Multiple Presses - Apply product through an ICC AT-6™ chemical dispensing system that is especially designed and installed for your plant.

Safety and Additional Technical Assistance

As with any chemical, always refer to associated Material Safety Data Sheet for recommendations on appropriate safety gear and precautions. MSDS's may be obtained on the web at www.icc-chemicals.com or by calling Intercontinental Chemical Corporation at 800-543-2075 to obtain these and further technical or application support.
