Likely Routes of Exposure: Eyes, skin, inhalation and ingestion

Most Important Symptoms and Effects, Both Acute and Delayed:

May cause serious eye damage and may irritate skin and airways; possible allergic skin reaction. Overexposure may cause central nervous system (CNS) effects and also effects on liver, the blood-forming system, spleen, lungs & kidneys. May damage fertility or the unborn child. Harmful if swallowed and enters airways; ingestion would likely cause digestive tract irritation.

Acute Health Hazard Symptoms:

Eyes: May cause irritation, stinging, tearing, redness, swelling, tissue injury.
Skin: May cause irritation, burns, redness, blistering, cracking, drying, defatting, dermatitis.
Ingestion and Inhalation: Irritation of digestive tract, gastric and intestinal disturbances, nausea, vomiting, diarrhea. May cause respiratory irritation (nose, throat, airways), central nervous system (CNS) depression, fatigue, abdominal pain, coughing, kidney damage, headache, dizziness, weakness, drowsiness, confusion, and unconsciousness.

Acute Health Hazards: Skin, eyes and respiratory irritant; kidney damage; CNS depressant.

Chronic Effects: One or more components have shown effects on the blood, kidney, liver, spleen based on animal test data; otherwise, noted are reproductive effects.
